OPERATING INSTRUCTIONS

Fill Markers with any kind of *flour, hydrated lime* or *talc*. Push down on kick plates (3). Marker now will deposit a white line which indicates exact edge of Spreader application.

The marking line toward the non-treated side of the lawn provides an exact alignment guide for the return trip.

White line shows where the end of the hopper should be so you get a slight overlap. Another way is to watch so that inside of Spreader wheel just clears guide line.

Both Markers may be left open if desired. Used in this manner, one Marker is always re-applying exactly over the line that marks the outside edge of previous Spreader strip.

To conserve marking material, only Marker adjacent to untreated area need be in operation. When Spreader direction is reversed, kick off Marker and push down other one.

WHEN NOT IN USE, Guide Markers should be emptied. To do this, turn Spreader upside down. Rotate drive wheels several times to make certain all material is jarred loose. Place few drops of oil on pivoting springs before storing.

ASSEMBLY DIRECTIONS

To attach Marker, have Spreader standing on wheels and legs.

Have Spreader "open" by pushing operating lever (1) toward hopper.

Remove left Spreader leg and replace with left Marker (2).

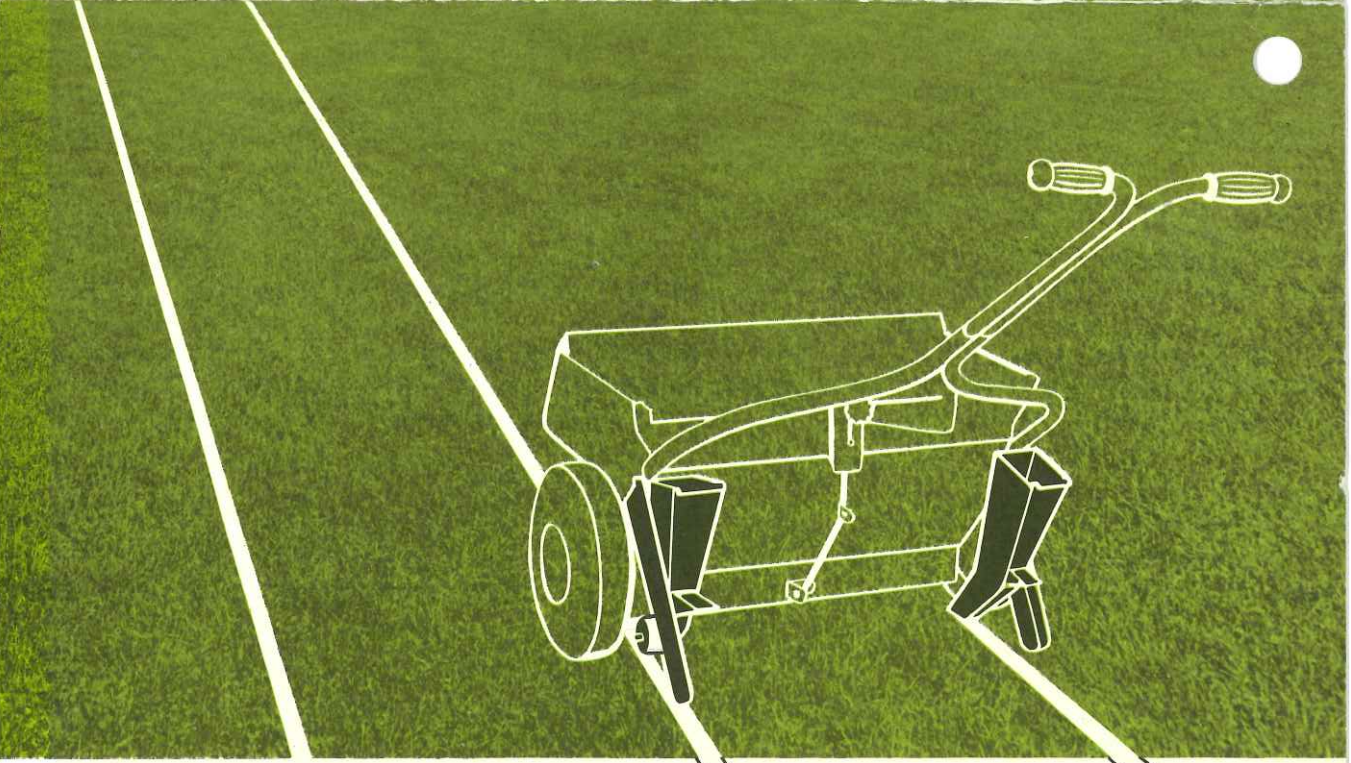
Replace nuts on bolts but *do not tighten with wrench at this stage.*

Push down kick plate (3) so that drive wheel (4) presses against Spreader wheel. *This is important to assure maximum spring tension between drive wheel and Spreader wheel.* Now tighten nuts (2) firmly with wrench.

Remove right leg and replace with right Marker in same manner.

Received in Div. One 3/14/63

Note Printers Code date of Publication (over) 4/10/59



MARKING DEVICE

shows where you've been with your spreader. Fits any Scotts Spreader. #35 or #75 . . . . . pair $4.95

Guide lines at left were made on previous two trips across the lawn. Line at right is being applied this trip.
